DETAILED ACTION

Claim Rejections - 35 USC § 102

1. **Claims 1-21** rejected under 35 U.S.C. 102(e) as being anticipated by Irube et al. (6377818).

As per **claim 1**, Irube discloses a mobile telephone system that sends/receives connection requests. The requests inherently comprise an NDC for the purpose of routing the call through the correct calling relay (examiner notes that the 'NDC' could be read as the exchange number, the area code, or any additional signaling required to properly route the call as per a known standard) The request further inherently comprises a subscriber number for the purpose of directing the call to the correct subscriber. The call request data structure further comprises a subaddress that notifies the destination terminal as to which communication medium should be used to connect the call (voice mode or video mode) (ABSTRACT, Col 16 lines 43-58).

As per **claim 3**, claim rejected as a method performed by the device of the claim 1 rejection.

As per **claim 9**, claim rejected for same reasons as claim 3, the subaddress is the origination continuation message.

Art Unit: 2643

As per **claims 15, 20**, claim rejected for same reasons as claim 9 rejection. The device may also use the called number (originating message) to detect what type of call is being sent (no .

As per **claim 21**, claim rejected for same reasons as claim 1 rejection. The device comprises a display. After receiving a call request, the user selects to receive the call by answering or granting execution the phone/video call (Col 9 lines 25-60) (Col 13 lines 30-52).

As per **claims 2,10**, the subaddress identifies either a voice or video medium.

As per **claim 4**, claim rejected for same reasons as claim 9 rejection.

As per **claims 5,11**, the device may identify the voice or video mode by the called number (without an origination continuation message).

As per **claims 6,12**, since the device receives digital data, the system must wait a predetermined time for the origination continuation information to be processed with the amount of time being determined by the clocking rate of the device. The device determines the type of call based upon the subaddress.

As per **claims 7,13**, claim rejected for same reasons as claim 21 rejection.

As per **claim 8**, both the calling and called devices implement a handshaking procedure in which they notify each other of any mode requests and/or mode refusals (Col 16 line 30 to Col 17 line 25).

As per **claim 16**, the appropriate medium is chosen based upon the type of call (Col 19 lines 3-43).

Art Unit: 2643

As per **claim 17**, claim rejected for same reasons as claim 6. The device may look for a subaddress, or use the calling information (without the subaddress) to determine the call type (Col 18 lines 15-27).

As per **claim 18**, claim rejected for same reasons as claim 21 rejection.

Additionally, the user can select whether to connect the terminal or not (going offhook) and the called device will send the appropriate messaging to the calling device (Col 18 lines 38-65).

As per **claim 19**, claim rejected for same reasons as claim 1 rejection.
